

CONTENTS IN DETAIL

ACKNOWLEDGMENTS

xv

INTRODUCTION

xvii

What This Book Is	xviii
Is It Possible to Teach PCB Design?	xviii
Who This Book Is For	xix
What's in the Book.	xix
What You'll Need	xxi
The Exercises.	xxii

PART I: FROM IDEA TO SCHEMATIC

1

1

DESIGN CONSIDERATIONS

3

Layers of Abstraction	4
Tracing the Evolution of a Design	4
Layer 1: Schematic or Simulation	4
Layer 2: The Breadboard	8
Layer 3: Proof-of-Concept Hardware	9
Layer 4: Form-Fit-Function Prototype.	11
Layer 5: Production-Ready PCB	13
From Abstraction to Implementation.	13
Secondary Design Parameters	14
Component Tolerance	14
Environmental Factors	14
DC Bias	15
Cost and Quantity.	15
Power Source and Consumption	16
Interface and Input/Output (I/O)	16
Design for X.	16
Schedule	16
Form Factor and Envelope	17
Security, Safety, and Compliance	17
Product Lifetime.	17
Component Availability	18
Exercise 1: Simulate a Circuit.	18
Summary	19

2

BUILDING YOUR SCHEMATIC COMPONENT LIBRARY

21

Sourcing Schematic Components	22
---	----

Distinguishing Between Similar Components	23
Common Component Types	23
Resistors	23
Capacitors	25
Connectors	25
Integrated Circuits	26
Other Common Electrical Components	27
The Anatomy of a Symbol	27
Reference Designators	28
Pin Details	28
Part Numbers	29
Component Packaging Options	30
Reading Datasheets for Schematics	31
Exercise 2: Create a Custom Schematic Symbol	33
Choose Your Symbol Style	33
Add Your Pins	34
Draw Your Symbol	35
Save and Place Your Symbol	35
Summary	35

3

CAPTURING A SCHEMATIC 37

Block Diagrams	38
Schematic Design Choices	38
Structuring Multisheet Schematics	39
Drawing Explicit or Net-Based Connections	41
Segmenting Schematics by Function	43
Beyond Circuit Function	45
Fiducials	45
Part Number Blocks	45
Do-Not-Place Designations	45
Test Points	46
Mounting Hardware	46
Jumpers	46
Leveraging the Datasheet	46
Exercise 3: Schematic Capture	48
Source and Place Your Components	49
Add Wires, Power Symbols, and Ports	50
Create the Parent Sheet	52
Add Non-Electrical and Test Features	53
Add Professional Formatting	54
Summary	55

PART II: PHYSICAL DESIGN 57

4

COMPONENT FOOTPRINTS AND PACKAGES 59

The Component Footprint	60
Packaging Types	61
Through-Hole Components	61

Surface-Mount Components	62
Hybrid Component Types	66
Vendor-Specific Components	67
Footprint Libraries	67
Finding Footprint Information	68
Organizing Footprint Libraries	69
Exercise 4: Create a Custom Component Footprint	69
Create the First Pad	69
Create the Other Pads	70
Summary	71

5 THE LAYERS OF A PCB 73

Signal Layers	74
Solder Mask	75
Silkscreen	78
Paste Mask	79
Mechanical Layers	80
Multilayer and Keepout Layers	80
Features of a Complete Component Footprint	81
Pin 1 Markings	81
3D Models	82
Keepout Designations	83
Other Features	83
Exercise 5: Complete Your Custom Footprint.	84
Define the Solder and Paste Mask	84
Add Silkscreen	84
Create a 3D Body	85
Define Keepouts	85
Summary	85

6 PLANNING A PCB'S STRUCTURE 87

PCB Material Selection	88
Insulating Material	88
Copper Weight	90
Stackup Design Considerations	90
Number of Signal Layers	91
Layer Construction	92
Power and Ground Planes	92
Capacitance and PCB Design	95
Decoupling Capacitors	98
Bypass Capacitors	100
Design with Capacitors	100
Layer Order	101
Exercise 6: Define a Layer Stackup	101
Summary	104

7

COMPONENT PLACEMENT

105

Board Setup	106
Transferring Component Footprints to the PCB.	106
Adjusting Grid Settings and Orientation.	106
Drawing the Board Outline.	107
Defining the Initial Layer Stackup.	109
Visualizing Connections with a Ratsnest	109
Placement Strategies.	110
Following Datasheet Guidance	110
Grouping Related Components	112
Optimizing Layout with Part Swapping	112
Exercise 7: Place a Design.	114
Bring in the Components	116
Prepare the Board	117
Place the Components	118
Verify the Design in 3D	119
Summary	120

8

VIAS AND ROUTING

121

Working with Vias	122
Via Types.	123
Via Sizing	124
Other Via Design Considerations	126
Via Arrays	129
Routing Best Practices	130
Revisit Component Placement and Layer Stackup	130
Route by Priority	130
Avoid Automated Routing.	130
Keep Traces Short and Direct	131
Use 45-Degree Angles.	131
Keep Vias Off Pads	131
Connect Traces to Pads Properly	132
Use Short and Wide Connections for Power and Ground.	133
Prefer Through-Hole Vias	133
Use Dimensionally Biased Routing Layers	133
Avoid Sharp Corners, T Connections, and Stubs	134
Optimize Trace Width and Spacing	134
Review Copper Regions.	135
Exercise 8: Route an Example Design	137
Pour the GND Polygon on Layer 1	138
Pour the Power Polygon on Layer 2	138
Connect and Arrange Components as Needed.	138
Route the Remaining Nets	140
Summary	141

PART III: PREPARING FOR PRODUCTION

143

9

REFINING A DESIGN

145

Cleaning Up Reference Designators	145
Design for Test	148
Design for Manufacturing	149
Setting Design Rules	150
Electrical Rules	151
Routing Rules	152
Mask-Related Rules	153
Plane and Polygon Rules	153
Manufacturing Rules	155
High-Speed Rules	157
Placement Rules	158
Design Rule Checks	158
Exercise 9: Define Design Rules and Run Rule Checks	159
Summary	162

10

DESIGN REVIEWS

163

Schematic Design Review	164
Missing or Superfluous Components	164
Net Connectivity	166
Component Properties	168
PCB Design Review	170
Physical Review	170
Electrical Review	172
Exercise 10: Conduct a Schematic Design Review	174
The Schematics	174
The Review Results	176
Summary	177

11

BUILDING YOUR BOARD

179

Output Files	180
Gerber Files	180
NC Drill Files	181
Supplemental Files	182
Alternative Output Formats	185
Output File Validation	185
Fabrication	186
Ordering Options	186
Panels and Pallets	189
Assembly	192
Parts Acquisition	192
Soldering Options	194
Automated Assembly	196
Exercise 11: Examine Gerber and NC Drill Files	197
Summary	200

12	
TESTING FINISHED BOARDS	201
Manufacturer Testing	202
Bare Board Testing	202
Assembled Board Checks.	202
Board Bring-Up	203
Formalized Internal Testing	204
Types of Tests	204
The Testing Process	205
Tools and Technologies	206
Other Techniques	207
Exercise 12: Add Test Features to a Design.	208
Summary	211
 A	
PCB DESIGN SOFTWARE	213
Choosing a Design Tool	213
Saturn PCB Toolkit	215
Conductor Properties	216
Conductor Impedance	216
Differential Pairs/XTALK	216
Via Properties.	217
 B	
STANDARD RESISTOR AND CAPACITOR VALUES	219
 GLOSSARY	223
 INDEX	231
