

CONTENTS IN DETAIL

FOREWORD	xix
-----------------	------------

ACKNOWLEDGMENTS	xxi
------------------------	------------

INTRODUCTION	xxiii
---------------------	--------------

What's in the Book?	xxiv
Who Should Read This Book?	xxvi
Online Resources	xxvi

PART I FOUNDATIONS OF SPACE SECURITY

1	
A SPACE SECURITY PRIMER	3

What Is a Space System?	3
Segments of Space Systems	4
Satellite Use Cases	4
Types of Orbits	6
Importance of Space System Security	8
Vulnerabilities and Threats	8
Parallels with Embedded Systems and ICS	9
Challenges in Securing Space Systems	10
Technical	10
Environmental	11
Legal and Regulatory	12
Test Considerations	13
Before vs. After Launch	13
Electrical Qualification Models	13
Conclusion	15

2	
THE THREAT LANDSCAPE	17

Anti-Satellite Weapons	18
Direct Ascent	18
Co-Orbital	19

Electronic Warfare	19
Jamming	19
Spoofing	21
High-Power Microwave Weapons	21
High-Energy Lasers	21
Electromagnetic Pulses	22
Other Physical Attack Vectors	22
Ground Segment Attacks	22
Undersea Cable Damage	23
Cyberattacks	23
Hijacking	24
Phishing	24
Distributed Denial of Service	24
Zero Days	25
Malware	25
Supply Chain Attacks	27
Case Study: The APT Attack of the KA-SAT Satellite Network	28
Nonadversarial Threats	29
Radiation	29
Space Weather	30
Temperatures	32
Vacuums	32
Atmospheric Effects	33
Micrometeoroids	33
Space Debris	33
Risk Assessment with the NIST Cybersecurity Framework	34
Threat Modeling with OWASP Threat Dragon	36
Conclusion	40

3	
SECURITY TESTING	41
Approaching a Space System Security Test	42
Reconnaissance	42
Testing the Spacecraft Platform	43
Hardware	43
Operating Systems	44
Onboard Software	44
Testing the Network Layer	46
Network Enumeration	47
Traffic Analysis and Reverse Engineering	49
Testing the User Application	49
Client-Side Validation	50
Authentication	50
Session Management	51
Access Control and Authorization	51

Server-Side Logic	52
Common Spacecraft Functionalities	53
A Zero-Day Hunting Methodology	53
Taint Analysis	53
Static Analysis and Debugging	54
Black-Box Approaches	54
Exploit Development	55
Conclusion	55

PART II THE GROUND SEGMENT

4 GROUND-SPACE COMMUNICATIONS 59

The Space Packet Protocol	60
Assembling a Space Packet	61
Working with CCSDS Time Formats	63
The Packet Utilization Standard	65
Telemetry Packets	66
Request Verification Service	69
Telecommand Packets	71
Device Access Service	73
Space Data Link Protocols	76
TM Protocol	76
TC Protocol	81
Space Data Link Security Protocol	86
Communications Operation Procedure-1	89
Synchronization and Channel Coding	90
Channel Coding for TM Frames	90
Coding and Synchronization in TC Frames	93
Radio Frequency and Modulation Systems	93
Conclusion	94

5 MISSION CONTROL SYSTEMS 95

Functions of a Mission Control System	96
Common Software Solutions	98
The Yamcs Framework	98
Setting Up Yamcs	99
Exploring the Interface	100
Enabling Authentication	111

The OpenC3 COSMOS Command-and-Control Suite	112
Installing COSMOS	112
Performing Basic Operations	114
Writing Automation Scripts	119
The F' Ground Data System	120
Getting Started	120
Sending Telecommands.....	123
Handling Events	123
Viewing Dictionaries	124
Conclusion	125

6 EXPLOITING GROUND SEGMENT PROTOCOLS 127

The Space Link Extension Protocol	128
Telemetry	128
Telecommanding.....	129
Implementations	132
Installation	132
Configuration.....	136
Test Harness	139
Basic Operations	142
Hacking the Protocol	145
Capturing Traffic with Wireshark	145
Analyzing the SLE Protocol	150
Developing an Exploit	152
Testing the Exploit.....	155
Conclusion	157

7 HACKING GROUND SYSTEMS 159

Cross-Site Scripting in F' GDS	159
Setting Up F' GDS	160
Black-Box Testing	162
Analyzing the Vulnerability	165
Developing a Proof of Concept	166
Remote Code Execution in OpenC3 COSMOS	169
Setting Up COSMOS.....	169
Finding the Vulnerability	170
Exfiltrating User Data	172
Getting to Remote Code Execution	175
Developing an Exploit	178

Privilege Escalation in Yamcs	182
Setting Up Yamcs	182
Discovering a Directory Traversal Vulnerability	189
Deleting Arbitrary Files	191
Demonstrating the Impact	192
Conclusion	194

PART III

THE SPACE SEGMENT

8

FLIGHT SOFTWARE FRAMEWORK DEPLOYMENT

197

What Runs on the Spacecraft?	198
The F' Onboard Framework	198
Exploring the F' Architecture	198
Interacting with the Flight Software	201
The core Flight System	203
Exploring the cFS Architecture	203
Setting Up cFS	206
Reviewing the Configuration	207
Sending Commands to the Spacecraft	211
Receiving Telemetry	214
Conclusion	215

9

TARGETING ONBOARD FLIGHT SOFTWARE

217

Denial of Service in the F' Spaceflight System	218
Setting Up	218
Exploring the Environment	220
Finding a Testing Tool	221
Debugging the Ground Software	223
Debugging the Flight Software	228
Understanding the Queue	230
Out-of-Bounds Reads in the core Flight System	232
Locating the Memory Manager Functionality	232
Tracing the Path to a Crash	234
Building a Malicious Telecommand	239
Triggering the Crash	241
Conclusion	244

PART IV THE USER SEGMENT

10 ATTACKING SATCOM TERMINALS 247

A Deeper Dive into the KA-SAT Hack	248
Extracting Firmware	249
Emulating the Viasat Firmware	252
Setting Up the Emulation	253
Interacting with the Emulator	255
Analyzing a Modem	255
Inspecting the Firmware Image	256
Examining a Binary	259
Reverse Engineering	260
Performing Malicious Software Updates	266
Conclusion	268

11 EXPLOITING GLOBAL NAVIGATION SATELLITE SYSTEMS 269

How Global Navigation Satellite Systems Work	269
Jamming	270
Calculating the Free Space Loss	271
Calculating Power Requirements	272
Protecting Against Jamming	274
Spoofing	275
Spoofing Types	275
The GPS Constellation Simulation	276
The Receiver	279
Conclusion	281

A THE SPACE SECTOR 283

Public Sector Organizations	283
National Space Agencies	283
Military and Defense Space Programs	286
Intergovernmental Organizations	286
Academia and Research Organizations	288

Private Sector Organizations	288
Commercial Space Companies	288
Nongovernmental Organizations	289
Satellite Operators and Service Providers	290
Law and Governance	290
Treaties and Agreements	290
National Laws	291
Export Regulations	292
Standards and Frameworks	292

B

SPACE SYSTEMS 295

Space Segment	295
Spacecraft Classes	295
Launch Vehicles	296
Bus and Structure	297
Thermal Control	297
Electrical Power	297
Data Processing	298
Telecommunications	298
Attitude Determination and Control System	298
Life Support	299
Mission Payload	300
Modes of Operation	300
Ground Segment	300
Ground Stations	300
Mission Control	301
User Segment	302
Architectures	302
Equipment and Interfaces	303

INDEX 305
