

CONTENTS IN DETAIL

FOREWORD TO THE FIRST EDITION	xvii
--------------------------------------	-------------

ACKNOWLEDGMENTS	xix
------------------------	------------

INTRODUCTION	xxiii
---------------------	--------------

This Is Not a HOWTO	xxiv
What This Book Covers	xxiv

1	
BUILDING THE NETWORK YOU NEED	1

Your Network: High Performance, Low Maintenance, and Secure	2
Where the Packet Filter Fits In	3
The Rise of PF	4
If You Came from Elsewhere	7
Pointers for Linux Users	7
Frequently Answered Questions About PF.	8
A Little Encouragement: A PF Haiku	11

2	
PF CONFIGURATION BASICS	13

The First Step: Enabling PF	14
Setting Up PF on OpenBSD	14
Setting Up PF on FreeBSD	15
A Simple PF Ruleset: A Single, Stand-Alone Machine	18
Writing a Minimal Ruleset	18
Testing the Ruleset	19
Slightly Stricter: Using Lists and Macros for Readability.	19
A Stricter Baseline Ruleset	20
Reloading the Ruleset and Looking for Errors	21
Checking Your Rules	22
Testing the Changed Ruleset	23
Displaying Information About Your System	23
Looking Ahead	25

3	
INTO THE REAL WORLD	27

A Simple Gateway.	27
Keep It Simple: Avoid the Pitfalls of in, out, and on	28
Understanding Network Address Translation vs. IPv6.	29
Defining Your Local Network	31
Setting Up a Gateway.	32
A Point of Policy Enforcement	36
Testing Your Ruleset	37

Tables Make Your Life Easier	38
Let dhcpd(8) Direct Access	39
Making Your Network Troubleshooting-Friendly	40
Do We Let It All Through?	41
The Easy Way Out: The Buck Stops Here	42
Let ping Through	42
Helping traceroute	43
Path MTU Discovery	43
That Sad Old FTP Thing	45
If We Must: ftp-proxy with Divert or Redirect	46
Variations on the ftp-proxy Setup	47
Basics and History Covered, We Move On	48

4 WIRELESS NETWORKS MADE EASY 49

A Little IEEE 802.11 Background	50
Wi-Fi Is Just Another Interface or Subnet	50
Basic Wireless Network Security Features	51
MAC Address Filtering	51
WEP	51
WPA	52
The Right Hardware for the Task	52
Setting Up a Simple Wireless Network on OpenBSD	53
Setting Up a Simple Wireless Network on FreeBSD	55
The Access Point's PF Ruleset	56
Access Points with Three or More Interfaces	57
Handling IPsec, VPN Solutions	58
The Client Side	59
OpenBSD Setup	59
FreeBSD Setup	61
Guarding Your Wireless Network with authpf	62
A Basic Authenticating Gateway	63
Wide Open but Actually Shut	65
With Wireless in Hand, We Move On	66

5 BIGGER OR TRICKIER NETWORKS 67

A Web Server and Mail Server on the Inside: Routable IPv4 Addresses	68
A Degree of Separation: Introducing the DMZ	72
Sharing the Load: Redirecting to a Pool of Addresses	74
Getting Load Balancing Right with relayd	75
A Web Server and Mail Server on the Inside—the NAT Version	81
DMZ with NAT	82
Redirection for Load Balancing	83
Back to the Single NATed Network	84
Filtering on Interface Groups	86
The Power of Tags	87
The Bridging Firewall	88
Basic Bridge Setup on OpenBSD	89
Basic Bridge Setup on FreeBSD	90
The Bridge Ruleset	91

Handling Nonroutable IPv4 Addresses from Elsewhere	92
Establishing Global Rules	93
Restructuring Your Ruleset with Anchors	93
How Complicated Is Your Network?—Revisited	95

6

TURNING THE TABLES FOR PROACTIVE DEFENSE

97

Turning Away the Brutes	98
Responding to SSH Brute-Force Attacks	98
Setting Up an Adaptive Firewall	99
Tidying Your Tables with pfctl	101
Stepping Up: Sharing Data, Acting as a Honeypot.	102
Sharing Miscreant Data with Others	102
Creating a Honeypot: A Website Example	103
Managing Blacklists on FreeBSD with blacklistd	104
Diverting Miscreants to Minimal-Bandwidth Queues	104
Trapping Miscreants with endlessh	105
Giving Spammers a Hard Time with spamd.	105
Analyzing Network-Level Behavior and Blacklisting	106
Greylisting: My Admin Told Me Not to Talk to Strangers	110
Tracking Your Real Mail Connections with spamlogd	114
Greytrapping	115
Managing Lists with spamdb	117
Detecting Out-of-Order MX Use.	119
Handling Sites That Don't Play Well with Greylisting	119
Scripted Maintenance for Your nospamd	120
Spam-Fighting Tips	121
Now We Know Our Proactive Defense Toolbox Better and Move on to Shaping	122

7

TRAFFIC SHAPING WITH QUEUES AND PRIORITIES

123

Always-on Priority and Queues for Traffic Shaping	125
Shaping by Setting Traffic Priorities	125
Introducing Queues for Bandwidth Allocation	127
Using Queues to Handle Unwanted Traffic	137
Transitioning from ALTQ to Priorities and Queues	138
FQ-CoDel Flows for Fair Bandwidth Sharing	140
Directing Traffic with ALTQ	141
Basic ALTQ Concepts.	141
Queue Schedulers, aka Queue Disciplines	142
ALTQ Setup	142
Priority-Based Queues.	143
Using ALTQ Priority Queues to Improve Performance	143
Using a match Rule for Queue Assignment	144
Using Class-Based Bandwidth Allocation for Small Networks	145
A Basic HFSC Traffic Shaper	146
Queueing for Servers in a DMZ	149
Using ALTQ to Handle Unwanted Traffic	150
Conclusion: Traffic Shaping for Fun and Perhaps Even Profit	152

8	REDUNDANCY AND RESOURCE AVAILABILITY	153
	Redundancy and Failover: CARP and pfsync	154
	The Project Specification: A Redundant Pair of Gateways.	154
	CARP Setup	156
	Synchronized States: Adding pfsync	162
	The Ruleset.	164
	CARP for Load Balancing.	165
	Robustness and Resilience Covered, We Move on to Observing and Measuring	168
9	LOGGING, MONITORING, AND STATISTICS	169
	PF Logs: The Basics.	170
	Logging the Packet's Path Through Your Ruleset: log (matches)	172
	Logging All Packets: log (all).	173
	Logging to Several pflog Interfaces	175
	Logging to syslog, Local or Remote	175
	Tracking Statistics for Each Rule with Labels	177
	Additional Tools for PF Logs and Statistics	179
	Keeping an Eye on Things with systat	179
	Keeping an Eye on Things with pftop.	181
	Graphing Your Traffic with pfstat.	182
	Collecting NetFlow Data with pflow(4).	184
	SNMP Tools and PF-Related SNMP MIBs	191
	Log Data as the Basis for Effective Debugging	191
10	GETTING YOUR SETUP JUST RIGHT	193
	Things You Can Tweak and What You Probably Should Leave Alone	194
	Block Policy	194
	Skip Interfaces	195
	State Policy	195
	State Defaults	196
	syncookies	196
	Limits	197
	Debug	198
	Ruleset Optimization	199
	Timeouts.	200
	Optimization	201
	Fragment Reassembly	201
	Cleaning Up Your Traffic.	202
	Packet Normalization with scrub.	202
	Protection Against Spoofing with antispooof.	202
	Testing Your Setup	203
	Debugging Your Ruleset	205
	Know Your Network and Stay in Control.	208

A	
RESOURCES	209
General Networking and BSD Resources on the Internet	209
Developer Blogs, Sample Configurations, and Related Musings	211
BSD and Networking Books	212
spamd and Greylisting-Related Resources	213
Book-Related Web Resources	214
Buy OpenBSD and FreeBSD Swag, Donate!	214
B	
A NOTE ON HARDWARE SUPPORT	215
Getting the Right Hardware.	216
Issues Facing Hardware Support Developers	217
How to Help the Hardware Support Efforts	217
INDEX	219
