INTRODUCTION	xxxi
---------------------	-------------

A Brief History of R	xxxi
About This Book	xxxii
What's New in the Second Edition	xxxv
Conventions and Styles	xxxvi
Code	xxxvi
Math and Equation References	xxxvii
Exercises	xxxviii
For Students	xxxviii
For Instructors	xxxix
Web Resources	xl

PART I THE LANGUAGE

1 GETTING STARTED	3
------------------------------	----------

1.1	Obtaining and Installing R from CRAN	3
1.2	Opening R for the First Time	3
1.2.1	Base R GUI	4
1.2.2	RStudio and Other Third-Party Editors	5
1.3	Workflow Basics	5
1.3.1	Console and Editor Panes	5
1.3.2	Code Execution	7
1.3.3	Comments	7
1.3.4	Working Directory	7
1.3.5	R Packages	9
1.3.6	Help Files and Function Documentation	10

1.4	Saving Work and Exiting R	13
1.4.1	Workspaces	13
1.4.2	Scripts	14

2 NUMERICS, ARITHMETIC, ASSIGNMENT, AND VECTORS 15

2.1	R for Basic Math	15
2.1.1	Arithmetic	16
2.1.2	Logarithms and Exponentials	17
2.1.3	E-Notation	18
2.2	Assigning Objects	19
2.3	Vectors	21
2.3.1	Vector Creation	21
2.3.2	Sequences, Repetition, Sorting, and Lengths	22
2.3.3	Subsets and Element Extraction	26
2.3.4	Vector-Oriented Behavior	31

3 MATRICES AND ARRAYS 37

3.1	Two-Dimensional Matrix	37
3.1.1	Matrix Creation	38
3.1.2	Subsets	40
3.1.3	Matrix Operations and Algebra	45
3.2	Multidimensional Arrays	51
3.2.1	Array Creation	52
3.2.2	Subsets, Extractions, and Replacements	53

4 NON-NUMERIC VALUES 59

4.1	Logical Values	59
4.1.1	TRUE or FALSE?	60
4.1.2	Relational Operators	60
4.1.3	Logical Operators	64
4.1.4	Logicals Are Numbers!	67
4.1.5	Logical Subsetting and Extraction	68
4.2	Characters	72
4.2.1	String Creation	73
4.2.2	Concatenation	74
4.2.3	Escape Sequences	77
4.2.4	Substrings and Matching	78
4.3	Factors	81
4.3.1	Identifying Categories	81
4.3.2	Defining and Ordering Levels	83
4.3.3	Dropping Categories	86
4.3.4	Working with the Numeric Representation of Factors	86
4.3.5	Collapsing Factors	87

4.3.6	Combining Factors	89
4.3.7	Creating Factors from Continuous Values	90
4.4	Dates and Times	92
4.4.1	Creating and Formatting Dates	93
4.4.2	Performing Simple Operations with Dates	95
4.4.3	Incorporating Time	97

5 LISTS AND DATA FRAMES 103

5.1	Lists of Objects	103
5.1.1	Creating Lists and Accessing Components	104
5.1.2	Naming	106
5.1.3	Nesting	107
5.2	Data Frames	109
5.2.1	Construction	110
5.2.2	Basic Subsets	112
5.2.3	Column Insertions and Data Frame Combinations	113
5.2.4	Logical Record Subsets	115
5.2.5	The Explicit subset Command	116

6 SPECIAL VALUES, CLASSES, AND COERCION 119

6.1	Special Values	119
6.1.1	Infinity	120
6.1.2	NaN: Not a Number	122
6.1.3	NA: Not Available	124
6.1.4	NULL	127
6.2	Types, Classes, and Coercion	130
6.2.1	Attributes	130
6.2.2	Object Class	132
6.2.3	Is-Dot Object-Checking Functions	136
6.2.4	As-Dot Coercion Functions	137

7 BASIC PLOTTING 145

7.1	Using plot with Coordinate Vectors	145
7.2	Visual Controls and Graphical Parameters	147
7.2.1	Automatic Plot Types	148
7.2.2	Title and Axis Labels	148
7.2.3	Color	149
7.2.4	Line and Point Appearances	151
7.2.5	Custom Region Limits	151
7.2.6	Aspect Ratio	152
7.3	Adding Points, Lines, and Text to an Existing Plot	154

7.4	The ggplot2 Package	160
7.4.1	Plotting a Toy Example	160
7.4.2	Setting Appearance Constants with Geoms	162
7.4.3	Aesthetic Mapping with Geoms	164

8 READING AND WRITING FILES 169

8.1	R-Ready Datasets	169
8.1.1	Built-In Datasets	170
8.1.2	Contributed Datasets	171
8.2	Reading in External Data Files	172
8.2.1	The Table Format	172
8.2.2	Spreadsheet Workbooks	176
8.2.3	Web-Based Files	177
8.2.4	Other File Formats	179
8.3	Writing Out Data Files and Plots	179
8.3.1	Datasets	179
8.3.2	Plots and Graphics Files	180
8.4	Ad Hoc Object Read/Write Operations	184
8.4.1	save and load	185
8.4.2	saveRDS and readRDS	186
8.4.3	dput and dget	186
8.4.4	Suitability	187

PART II PROGRAMMING

9 CALLING FUNCTIONS 193

9.1	Scoping	193
9.1.1	Environments	194
9.1.2	Search Path	196
9.1.3	Reserved and Protected Names	198
9.2	Argument Matching	200
9.2.1	Exact	200
9.2.2	Partial	201
9.2.3	Positional	202
9.2.4	Mixed	203
9.2.5	Ellipses	203
9.3	Pipes	205
9.3.1	Syntax and Examples	205
9.3.2	Should You Pipe?	207

10

CONDITIONS AND LOOPS

209

10.1	if Statements	209
10.1.1	Stand-Alone Statement	210
10.1.2	else Statements	213
10.1.3	Element-Wise Checks with ifelse	214
10.1.4	Nested and Stacked Statements	216
10.1.5	The switch Function	218
10.2	for Loops	223
10.2.1	Definition and Basics	223
10.2.2	Via Index or Value	226
10.2.3	Nests	228
10.3	while Loops	232
10.3.1	Definition and Basics	232
10.3.2	Condition Object Modification	233
10.4	Implicit Looping	238
10.4.1	The apply Function	238
10.4.2	Some apply Variants	240
10.4.3	When to Use Implicit Loops	242
10.5	Other Control Flow Mechanisms	243
10.5.1	break	243
10.5.2	next	244
10.5.3	repeat	246

11

WRITING FUNCTIONS

251

11.1	The function Command	251
11.1.1	Function Creation	252
11.1.2	The return Statement	256
11.2	Arguments	258
11.2.1	Considering Lazy Evaluation	258
11.2.2	Setting Defaults	261
11.2.3	Checking for Missing Arguments	263
11.2.4	Dealing with Ellipses	264
11.3	Specialized Functions	269
11.3.1	Helper Functions	269
11.3.2	Anonymous Functions	272
11.3.3	Recursive Functions	273

12

EXCEPTIONS, TIMINGS, AND VISIBILITY

277

12.1	Exception Handling	277
12.1.1	Errors and Warnings	278
12.1.2	try Statements	280

12.2	Progress and Timing	286
12.2.1	Tracking Progress: Are We There Yet?	286
12.2.2	Measuring Completion Time: How Long Did It Take?	287
12.2.3	Profiling Your Code: Where's the Bottleneck?	288
12.3	Masking	293
12.3.1	Function and Object Distinction	293
12.3.2	Data Frame Variable Distinction	297

PART III STATISTICS AND PROBABILITY

13 ELEMENTARY STATISTICS 303

13.1	Describing Raw Data	303
13.1.1	Numeric Variables	304
13.1.2	Categorical Variables	304
13.1.3	Examples	305
13.1.4	Univariate and Multivariate Data	306
13.1.5	Parameter or Statistic?	307
13.2	Summary Statistics	309
13.2.1	Measures of Centrality	309
13.2.2	Counts, Percentages, and Proportions	313
13.2.3	Rounding, Floors, Ceilings, and Absolute Values	315
13.2.4	Quantiles, Percentiles, and the "Five-Number Summary"	318
13.2.5	Measures of Spread	319
13.2.6	Relationships Between Numeric Variables	324
13.2.7	Outliers	329

14 BASIC DATA VISUALIZATION 333

14.1	Bar Plots and Pie Charts	333
14.1.1	Bar Plot Creation	334
14.1.2	In ggplot2	336
14.1.3	A Quick Pie Chart	337
14.2	Histograms	339
14.2.1	A Simple Example	340
14.2.2	Bin Width and Customization	340
14.2.3	In ggplot2	341
14.3	Density Plots	343
14.3.1	Construction	344
14.3.2	Bandwidths and Customization	344
14.3.3	When Multiple Densities Overlap	345
14.3.4	In ggplot2	347

14.4	Box Plots	350
14.4.1	Stand-Alone	350
14.4.2	Side-by-Side	351
14.4.3	In ggplot2	352
14.5	Violin Plots	353
14.5.1	Design and Interpretation	354
14.5.2	Side-by-Side Violins	355
14.5.3	In ggplot2	356
14.6	Scatterplots and Coordinate-Based Plots	357
14.6.1	Single Plot	358
14.6.2	Matrix of Plots	359
14.6.3	In ggplot2	361
14.6.4	Plots of Spatial Coordinates	365

15

PROBABILITY 371

15.1	What Is a Probability?	371
15.1.1	Events and Probability	372
15.1.2	Conditional Probability	373
15.1.3	Intersection	373
15.1.4	Union	374
15.1.5	Complement	375
15.2	Random Variables and Probability Distributions	376
15.2.1	Realizations	376
15.2.2	Discrete Random Variables	377
15.2.3	Continuous Random Variables	380
15.2.4	Shape, Skew, and Modality	388

16

COMMON PROBABILITY DISTRIBUTIONS 393

16.1	Common Probability Mass Functions	394
16.1.1	Bernoulli Distribution	394
16.1.2	Binomial Distribution	395
16.1.3	Poisson Distribution	400
16.1.4	Other Mass Functions	404
16.2	Common Probability Density Functions	404
16.2.1	Uniform	405
16.2.2	Normal	410
16.2.3	Student's t-Distribution	419
16.2.4	Exponential	422
16.2.5	Chi-Squared	426
16.2.6	F-Distribution	428
16.2.7	Other Density Functions	431

PART IV STATISTICAL TESTING AND MODELING

17 SAMPLING DISTRIBUTIONS AND CONFIDENCE 435

17.1	Sampling Distributions	435
17.1.1	For a Sample Mean	436
17.1.2	For a Sample Proportion	441
17.1.3	For Other Statistics	445
17.2	Confidence Intervals	446
17.2.1	An Interval for a Mean	446
17.2.2	An Interval for a Proportion	449
17.2.3	Other Intervals	450
17.2.4	Comments on the Interpretation of a CI	451

18 HYPOTHESIS TESTING 455

18.1	Components of a Hypothesis Test	455
18.1.1	Hypotheses	456
18.1.2	Test Statistic	457
18.1.3	p-Value	457
18.1.4	Significance Level	457
18.1.5	Criticisms of Hypothesis Testing	458
18.2	Testing Means	458
18.2.1	Single Mean	459
18.2.2	Two Means	462
18.3	Testing Proportions	473
18.3.1	Single Proportion	473
18.3.2	Two Proportions	476
18.4	Testing Categorical Variables	480
18.4.1	Single Categorical Variable	481
18.4.2	Two Categorical Variables	484
18.5	Errors and Power	489
18.5.1	Hypothesis Test Errors	489
18.5.2	Type I Errors	490
18.5.3	Type II Errors	493
18.5.4	Statistical Power	497

19 ANALYSIS OF VARIANCE 503

19.1	One-Way ANOVA	503
19.1.1	Hypotheses and Diagnostic Checking	504
19.1.2	Table Construction	506
19.1.3	ANOVA Table Construction with the aov Function	508

19.2	Two-Way ANOVA	511
19.2.1	A Suite of Hypotheses	511
19.2.2	Main Effects and Interactions	512
19.3	Kruskal–Wallis Test	516
19.3.1	Hypotheses	516
19.3.2	Example and Interpretation	516

20

SIMPLE LINEAR REGRESSION 521

20.1	An Example of a Linear Relationship	521
20.2	General Concepts	523
20.2.1	Defining the Model	523
20.2.2	Estimating the Intercept and Slope Parameters	524
20.2.3	Fitting Linear Models with lm	525
20.2.4	Illustrating Residuals	526
20.3	Statistical Inference	528
20.3.1	The summary Command	528
20.3.2	Regression Coefficient Significance Tests	529
20.3.3	Coefficient of Determination	530
20.3.4	Other summary Output	530
20.4	Prediction	531
20.4.1	Confidence Interval or Prediction Interval?	531
20.4.2	Interval Interpretation	532
20.4.3	Interval Plots	534
20.4.4	Interpolation vs. Extrapolation	536
20.5	Understanding Categorical Predictors	538
20.5.1	Working with Binary Variables: $k = 2$	538
20.5.2	Working with Multilevel Variables: $k > 2$	542
20.5.3	Changing the Reference Level	547
20.5.4	Treating Categorical Variables as Numeric	548
20.5.5	Checking for Equivalence with One-Way ANOVA	551

21

MULTIPLE LINEAR REGRESSION 555

21.1	Terminology	556
21.2	Theory	556
21.2.1	Extending the Simple Model to a Multiple Model	557
21.2.2	Representing in Matrix Notation	557
21.2.3	Reviewing a Basic Example	558
21.3	R Implementation and Interpretation	560
21.3.1	Adding Predictors	560
21.3.2	Interpreting Partial Effects	563
21.3.3	Visualizing the Multiple Linear Model	564
21.3.4	Finding Confidence Intervals	565

21.3.5	Computing the Omnibus F-Test	566
21.3.6	Predicting from a Multiple Linear Model	568
21.4	Transforming Numeric Variables	572
21.4.1	Polynomial	572
21.4.2	Logarithmic	578
21.4.3	Other Transformations	582
21.5	Interactive Terms	584
21.5.1	Concept and Motivation	584
21.5.2	One Categorical, One Continuous	586
21.5.3	Two Categorical	590
21.5.4	Two Continuous	591
21.5.5	Higher-Order Interactions	593

22

LINEAR MODEL SELECTION AND DIAGNOSTICS

599

22.1	Goodness-of-Fit vs. Complexity	599
22.1.1	Principle of Parsimony	600
22.1.2	General Guidelines	600
22.2	Model Selection Algorithms	601
22.2.1	Nested Comparisons: The Partial F-Test	601
22.2.2	Forward Selection	605
22.2.3	Backward Selection	609
22.2.4	Stepwise AIC Selection	613
22.2.5	Other Selection Algorithms	620
22.3	Residual Diagnostics	620
22.3.1	Inspecting and Interpreting Residuals	622
22.3.2	Assessing Normality	626
22.3.3	Illustrating Outliers, Leverage, and Influence	627
22.3.4	Calculating Leverage	629
22.3.5	Calculating Cook's Distance	631
22.3.6	Graphically Combining Residuals, Leverage, and Cook's Distance ..	635
22.4	Collinearity	640
22.4.1	Potential Warning Signs	640
22.4.2	Correlated Predictors: A Quick Example	641

PART V ADVANCED GRAPHICS

23

ADVANCED PLOT CUSTOMIZATION

647

23.1	Handling the Graphics Device	648
23.1.1	Manually Opening a New Device	648
23.1.2	Switching Between Devices	649

23.1.3	Closing a Device	650
23.1.4	Controlling Multiple Plots in One Device	651
23.2	Plotting Regions and Margins	654
23.2.1	Default Spacing	655
23.2.2	Custom Spacing	656
23.2.3	Clipping	657
23.3	Point-and-Click Coordinate Interaction	659
23.3.1	Retrieving Coordinates Silently	659
23.3.2	Visualizing Selected Coordinates	660
23.3.3	Placing Ad Hoc Annotations	661
23.4	Customizing Traditional R Plots	665
23.4.1	Graphical Parameters for Style and Suppression	665
23.4.2	Box Customization	667
23.4.3	Axis Customization	668
23.5	Specialized Text and Label Notation	670
23.5.1	Font	670
23.5.2	Greek Symbols	672
23.5.3	Mathematical Expressions	673
23.6	Extended Example: A Custom Scatterplot	675

24

GOING FURTHER WITH THE GRAMMAR OF GRAPHICS 685

24.1	A Quick Recap	685
24.2	Smoothing and Shading	686
24.2.1	Adding LOESS Trends	687
24.2.2	Constructing Smooth Density Estimates	689
24.3	Multiple Plots and Variable-Mapped Facets	691
24.3.1	Independent Plots	692
24.3.2	Facets Mapped to a Categorical Variable	695
24.4	Interactive Tools in ggvis	701

25

DEFINING COLORS AND PLOTTING IN HIGHER DIMENSIONS 709

25.1	Representing and Using Color	709
25.1.1	Red-Green-Blue Hexadecimal Color Codes	710
25.1.2	Built-in Palettes	714
25.1.3	Custom Palettes	715
25.1.4	Approaches to Color Indexing	716
25.1.5	Color Legends	720
25.1.6	Opacity	722
25.1.7	RGB Alternatives and Further Functionality	725
25.2	3D Scatterplots	728
25.2.1	Basic Syntax	729
25.2.2	Visual Enhancements	730

25.3	Preparing a Surface for Plotting	733
25.3.1	Constructing an Evaluation Grid	733
25.3.2	Constructing the z-Matrix	735
25.3.3	Conceptualizing the z-Matrix	735
25.4	Contour Plots	736
25.4.1	Contour Lines	737
25.4.2	Color-Filled Contours	743
25.5	Pixel Images	749
25.5.1	One Grid Point Equals One Pixel	749
25.5.2	Surface Truncation and Empty Pixels	752
25.6	Perspective Plots	761
25.6.1	Interpreting Basic Plots and Adjusting Angles	761
25.6.2	Coloring Facets	764
25.6.3	Rotating with Loops	767

26

INTERACTIVE 3D PLOTS

773

26.1	Point Clouds	773
26.1.1	Basic 3D Cloud: Points and Spheres	774
26.1.2	Color and Legends	775
26.1.3	Alternate 3D Point Characters	777
26.1.4	3D Text	778
26.1.5	3D Lines, Axes, Grids, and Other Annotations	779
26.1.6	Extended Example: A Custom, Interactive 3D Scatterplot	782
26.2	Bivariate Surfaces	788
26.2.1	Plotting Basic Perspective Surfaces	788
26.2.2	Adding Components	789
26.2.3	Coloring by z Value	791
26.2.4	Dealing with the Aspect Ratio	792
26.3	Trivariate Surfaces	798
26.3.1	Evaluation Coordinates in 3D	798
26.3.2	Isosurfaces	799
26.3.3	Example: Nonparametric Trivariate Density	804
26.4	Handling Parametric Equations	810
26.4.1	Simple Loci	811
26.4.2	Mathematical Abstractions	815

A

INSTALLING R AND CONTRIBUTED PACKAGES

827

A.1	Downloading and Installing R	827
A.2	Using Packages	829
A.2.1	Base Packages	829
A.2.2	Recommended Packages	830
A.2.3	Contributed Packages	830
A.3	Updating R and Installed Packages	838

A.4	Using Other Mirrors and Repositories	839
A.4.1	Switching CRAN Mirror	839
A.4.2	Reviewing Other Package Repositories	839
A.5	Citing and Writing Packages	839
A.5.1	Citing R and Contributed Packages	840
A.5.2	Writing Your Own Packages	841

B

WORKING WITH RSTUDIO 843

B.1	Basic Layout and Usage	844
B.1.1	Editor Features and Appearance Options	844
B.1.2	Pane Customization	845
B.2	Auxiliary Tools and Features	846
B.2.1	Projects	846
B.2.2	Package Manager	847
B.2.3	Support for Profiling	848
B.2.4	Support for Debugging	849
B.3	Markup, Document, and Graphics Tools	850
B.3.1	Sweave	850
B.3.2	knitr	851
B.3.3	R Markdown	851
B.3.4	Quarto.....	852
B.3.5	Shiny	854
